

Water Jug Tomato Planter Project

SUPPLIES:

- gallon size water jug
- scissors
- nail
- hammer
- twine
- small tomato plant
- potting soil

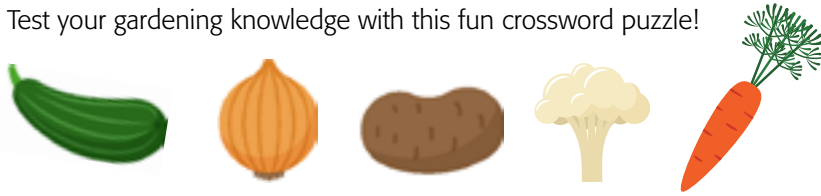

DIRECTIONS:

1. Remove any labels from the outside of the water jug and use the scissors to cut the bottom of the jug off.
2. Use the nail and hammer to create four evenly separated holes about an inch from the open bottom of the jug.
3. Thread an equal length loop of twine through each of the four holes.
4. Carefully push the root end of the tomato plant through the mouth of the jug.
5. Fill the jug with potting soil and hang the jug from the twine.
